

# Backend Developer (Java Expert)

- **Responsibilities:**
  - Develop and maintain the Java REST API layer.
  - Migrate business logic from the old stack to the new JBoss-based system.
  - Ensure robust, secure, and scalable backend development.
- **Skills:**
  - Strong expertise in Java EE, JBoss, and REST API development.
  - Familiarity with enterprise application development (EAR files).
  - Experience with database integration and performance tuning.
- **Requirements:**
  - **Experience:** 3–5 years of experience in backend development with Java EE and JBoss.
  - **Education:** Minimum qualification of a degree in Computer Science or equivalent.
  - **Desired Attributes:** Strong collaboration, adaptability, accountability, and attention to detail.
  - **Scrum Framework Knowledge:** Understanding of iterative development and testing, sprints, and task ownership.
- **Team Attributes**
  - **Collaboration:** Strong teamwork and communication skills to adapt to Agile workflows.
  - **Adaptability:** Ability to quickly learn new technologies and adapt to changing requirements.
  - **Accountability:** Ownership of tasks and responsibility for deliverables.
