QA Engineer

- **Responsibilities**:
    - Develop and execute test plans for both frontend and backend components.
    - Automate test cases for continuous integration and deployment.
    - Ensure the application meets quality standards and business requirements.
- **Skills**:
    - Experience in manual and automated testing (Jasmine & JUnit).
    - Knowledge of testing REST APIs and UI testing tools.
    - Strong analytical and attention-to-detail skills.
- **Requirements**:
    - **Experience**: 3–5 years of experience in software quality assurance.
    - **Education**: Minimum qualification of a degree in Computer Science or equivalent.
    - **Desired Attributes**: Strong collaboration, adaptability, accountability, and problem-solving skills.
    - **Scrum Framework Knowledge**: Experience with test automation in sprints and using CI/CD pipelines.
- **Team Attributes**
    - **Collaboration:** Strong teamwork and communication skills to adapt to Agile workflows.
    - **Adaptability:** Ability to quickly learn new technologies and adapt to changing requirements.
    - **Accountability:** Ownership of tasks and responsibility for deliverables.
